# Rubber Types

## NATURAL RUBBER

NR

**APPLICATIONS:** Torsional vibration dampers, engine mounting, rubber-metal suspension elements, diaphragms..  
**CHARACTERISTICS:** High mechanical and tear strength, elasticity as well as good low temperature behavior and low compression set.  
HIGH SWELL IN Mineral oils, greases and fuels.  
GOOD RESISTANCE TO SWELLING IN Water if temperature is not to high and glicol based oils.  
**TEMPERATURE RANGE FOR USE:** -60 °C to +80 °C  
After exposure to higher temperatures, it can soften an initial hardening.

## POLYBUTADIENE RUBBER

BR

**APPLICATIONS:** V-belt and bands.  
**CHARACTERISTICS:** High elasticity, resistance to abrasion and degradation by light, very good hot and cold properties.  
GOOD RESISTANCE TO SWELLING IN Dilute acids and bases, in alcohols and water.  
HIGH SWELL IN Hydrocarbons.  
**TEMPERATURE RANGE FOR USE:** - 60°C to +100°C

## STIRENE-BUTADIENE RUBBER

SBR

**APPLICATIONS:** Dynamic parts, technical goods, conveyor bands etc.  
**CHARACTERISTICS:** Abrasion resistance, ageing and heat resistance is better than NR.  
GOOD RESISTANCE TO SWELLING IN Inorganic and organic acids, as well as alcohols and water, and break fluids based on glicol.  
HIGH SWELL IN Mineral oils, lubrication greases and petroleum.  
**TEMPERATURE RANGE FOR USE:** -50°C to +100°C

## ETILENE - PROPYLENE – DIENE RUBBER

EPM/EPDM

**APPLICATIONS:** Radiator and heating hoses, washing machines belows and fittings, conveyor belts, roller covering and best suited for extruded profile sections and sealing strips which are exposed to weathering.  
**CHARACTERISTICS:** Very good resistance to ozone, ageing and weathering and are.  
GOOD RESISTANCE TO SWELLING IN Hot water, steam, wash liquids oxidising media and diluted acids.  
HIGH SWELL IN Aliphatic, aromatic and chlorinated hydrocarbons.  
**TEMPERATURE RANGE FOR USE:** -50°C, +150°C dir.

## BUTYL RUBBER

IIR

**APPLICATIONS:** Watering hoses, inner tyre, conveyor belt and mechanical parts.  
**CHARACTERISTICS:** Very low gas permeability, very good resistance to weathering and ageing and good electrical insulation..

GOOD RESISTNCE TO SWELL IN Organic and inorganic acids, break fluids based on glycol, vegetable and animal oil and esters.

HIGH SWELL IN Mineral and greases, petroleum and aliphatic, aromatic and chlorinated hydrocarbons.

**TEMPERATURE RANGE FOR USE :**-- 40°C, +120°C dir

## ACRYLONITRILE – BUTADIENE RUBBER

NBR

**APPLICATIONS:** Because of high oil and fuel resistance producing of sealing elements and hoses ,hydraulic and pneumatic fittings and covering of cylinder.

**CHARACTERISTICS:** High oil resistance and physical properties. Amount ACN content of polymer (%18-50) effects -swelling resistance in mineral oils, greases and fuels, -elasticity -cold flexibility , -gas permeability, -compression set.

GOOD RESISTANCE TO SWELLING IN Aliphatic hydrocarbons, eg, propane, butane, petroleum, mineral oils, vegetable and animal oils, greases, light heating oils and diesel fuel.

HIGH SWELL IN Aromatic hydrocarbons, eg, benzene; chlorinated hydrocarbons eg, three chloro-ethylene; flame retardant hydrolic fluids, esters, polar solvents and break fluids based on glicol.

**TEMPERATURE RANGE FOR USE:** -30°C to +100° C; for short periods up to 130 °C; for special blends, cold flexibility extends down to - 55 °C.

## CARBOXYLATED – NITRILE RUBBER

X-NBR

**CHARACTERISTICS:** Their properties are similar to those are of NBR polymers but they are characterized by improved abrasion behaviour in applications subjected to dynamic stress.

**TEMPERATURE RANGE FOR USE:** -23°C to + 100°C; for short periods ±130°C .

## ACRYLATE RUBBER

ACM

**APPLICATION:** Radial shaft seals, O-Rings and moulding at higher temparatures and oil containing aditives (active oils).

**CHARACTERISTICS:** Excellent ageing, ozone resistance; good elasticity, low gas permeability.

GOOD RESISTANCE TO SWELLING IN Mineral Oils (engine oils, transmission oils) even with aditives.

HIGH SWELL IN aromatic and chlorinated hydrocarbons,eg, fire retardant hydrolic fluids. Hot water, steam, acids, alkalies and amines react to destroy the materials.

**TEMPERATURE RANGE FOR USE:** -25°C to + 150°C

## SILICONE RUBBER

Q

**APPLICATION:** Termic, electric, automotive, food, health, construction defence and scurity sectors.

**CHARACTERISTICS:** High termal resistance, good cold flexibility, good dielectric properties, very good resistance to oxigen and ozone attack and above all the physical properties show only slight dependency on the temperature. The permeability to gases at room temperature is higher than that for other elastomers and this is especially noticeable with thin-walled diaphragms.

**MODERATE RESISTANCE TO SWELLING IN** Mineral oils (comparable to meterial based on CR) and break fluids based on glycol. Use in water up to about + 100°C is possible.

**HIGH SWELL IN** Low molecular weight esters and ethers, aliphatic and aromatic hydrocarbons.

**TEMPERATURE RANGE FOR USE:** - 60°C to + 200°C (for short priods to +230°C). Parts can be made from special blends which embrittle only below -100°C.

## FLUORO RUBBER

FKM

**APPLICATIONS:** Use where needs high performance, eg, aerospace industry, automotive industry and cylinder covering.

**CHARACTERISTICS:** High temparature resistance, chemical stability, low gas permeability, minimal weight loss in high vacuum. Resistance to ozone and to crack resistance in the presence of light are very good, as is the fire retardancy. Have excellent resistance to hot water and to steam.

**GOOD RESISTANCE TO SWELLING IN** Mineral oils and greases (even with most aditives), fuels, aliphatic and aromatic hydrocarbons, some fire retardant hydrolic fluids and synthetic aero-engines oils.

**HIGH SWELL IN** polar solvents and ketones, fire retardant hydrolic fluids of the Skydrol type and break fluids.

**TEMPERATURE RANGE FOR USE:** -20°C to + 200°C (for short priod to +230°C). Special grades: -35°C to +230°C.

## POLYURETHANE

AU

**APPLICATIONS:** Mining and constructing sector, production of parts that retardant to abrasion at automotive and machine industry, eg, lift tyres and cylinder covering.

**CHARACTERISTICS:** High mecanichal strength, good abrasion resistance, modulus of elasticity with can be varied within wide limits, good flexibility, hardness variable over a wide range whilst retaining good elasticity (AU fills the gap between soft rubber types which can be stretched and brittle plastics), very good resistance to ozone and oxigen.

**GOOD RESISTANCE TO SWELLING IN** mineral oils, greases, water and water-oil mixtures and aliphatic hydrocarbons

**TEMPERATURE RANGE FOR USE:** -30 °C to +80 °C and types which can be highly stressed up to +100 °C in mineral oils.

## CHLOROBUTADIEN RUBBER

CR

**APPLICATIONS:** Production of high pressure hydrolic and break hoses, seals, mountings, bumpers, V-belts and covering of cylinder and chemichal oil tankers

**CHARACTERISTICS:** Resistance to chemicals, to ageing ,to weathering effects and to ozone attacks and also by their flame resistance. Low gas permeability and high sticking performance to metals and to textiles.

**GOOD RESISTANCE TO SWELLING IN** Mineral oils with high aniline point, greases, many refrigerants and water.

**MODERATE RESISTANCE TO SWELLING IN** Mineral oils, petroleum and iso-octane.

**HIGH SWELL IN** Aromatics, eg, benzene, toluene, chlorinated hydrocarbons, esters ethers and ketones.

**TEMPERATURE RANGE FOR USE:** -45 °C to +100 °C depending of composition of the blend; (for short periods up to +130 °C.

## THERMOPLASTIC RUBBER

TPE

**APPLICATIONS:** Mechanical parts, hoses, automotive parts and health sector.

**CHARACTERISTICS:** Good elongation and high tensile strength.

## POLYTETRAFLUOROETHYLENE

PTFE

**APPLICATIONS:** Its use is favoured in oil cases where the retantion of residues is to be avoided.

**CHARACTERISTICS:** -The surface is slippery and repels most media. The electrical insulating outstandingly good. They are almost independent of frequency, temperature and weathering effects.

**TEMPERATURE RANGE FOR USE:** In between -200 °C and +260 °C. Even at below -200 °C, it still has some alasticty.

## POLYAMIDE

PA

**APPLICATIONS:** Suitable for machine parts of all types (gear wheels, plain bearings, guide rails, control cams).

**CHARACTERISTICS:** Surpasses the previously named meterials notably in its strength properties. High abrasion resistance, the tough structure and good dumping and dry-running properties.

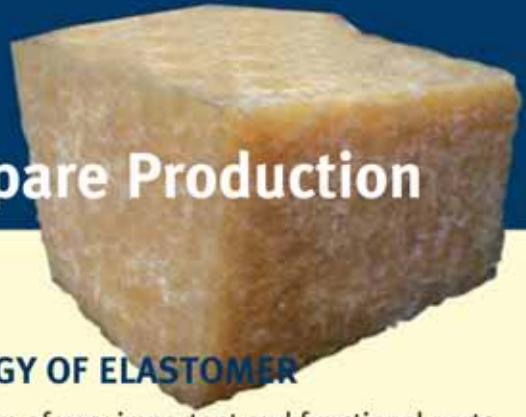

**UPPER TEMPERATURE FOR USE :**+120°C to +140°C.

## POLYVINYL – CHLORIDE

PVC

**APPLICATIONS:** Preferable used producting of belows, paskings, collars, coverings, sleevs, caps, socks and mountings for air conveying.

**TEMPERATURE RANGE FOR USE:** - 35°C to + 70°C.

# General Information on Rubber Spare Production

## ELASTOMERS

Elastomers are crosslinked (vulcanized) polymeric goods that brittle like glasses at too low temperatures, shows no viscose fluidity even too high temperature, shows good elasticity wide range in between room and breaking down temperature .

## TECHNOLOGY OF ELASTOMER

Uses production of very important and functional parts for human life, eg, fuel and break hoses, wipers, transmission belts, seals, axle bellows, radiator and air hoses, door and window sealings, shock absorbers and insulation elements etc. Elastomer supports used at free ways and bridges, expanding seals, sealing of drinking water pipes and producing of conveyor belts.

# SEALING ELEMENTS

The packing group of seal sets that named GULHAN GYP1 – GYP2 - GYP3 use for sealing pistons and piston systems. Produced by applying NBR polymer on cotton base cloth. Prepare different set combinations by using different number of parts. There is an imperative to use partly channel at packing systems. Parts must be cut 45° and installed by making 75° angle; if need to use close channel. However, this way is not preferred if, there is not an imperative.

It is a long life sealing element at sudden changes on pressure and temperature and speedy abrasions at critical work loading time on challenging to axel radial loads.

## COMPACT SETS

Constituting GYP4 – GYP5 serials these double action with polyamide bearing felt elements are contents 5 parts.

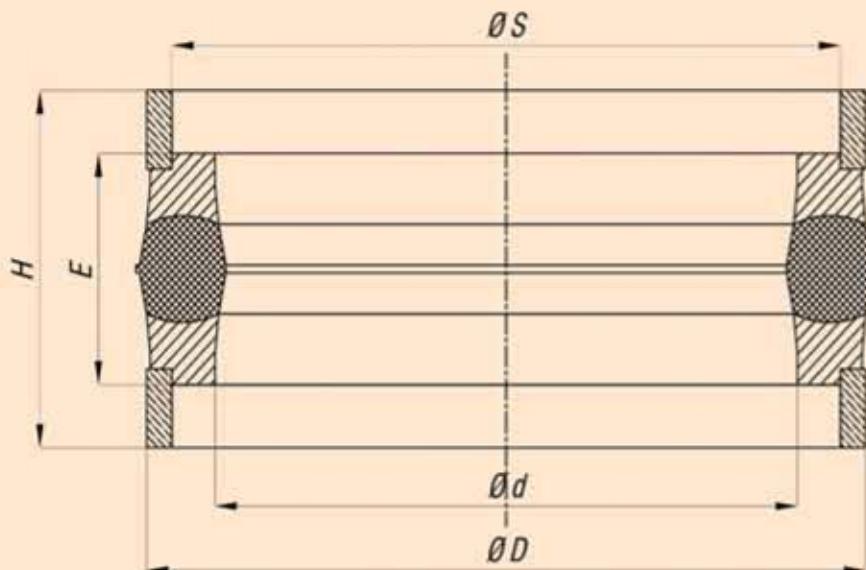

One of the best solutions for piston sealing at double acting hydraulic cylinders. They are sealing systems which combination of different elements that comprehensible with their names.

The biggest advantage of these types sealing elements is eliminating to bearing felt need that already in their contents. Making installation easier is other advantages of them. Because of spring shape of

## GÜLHAN COMPACT-5 FADROMA

medium part, it has capability of sudden remedy.

In addition, this medium part is propped by "U" type cloth bounded plastic. The polyamide rings installed near by these cloth-bounded parts eliminate the need of bearing felt by guarding to abrasion.

This type-sealing element preferred at design of cylinders with vibration, tottery or slide axis moveable parts of hydraulic unites

# SEALING ELEMENTS

GYP-6

Series of GYP6 (Nutrings) produced from Nitrile Rubber based polymers.

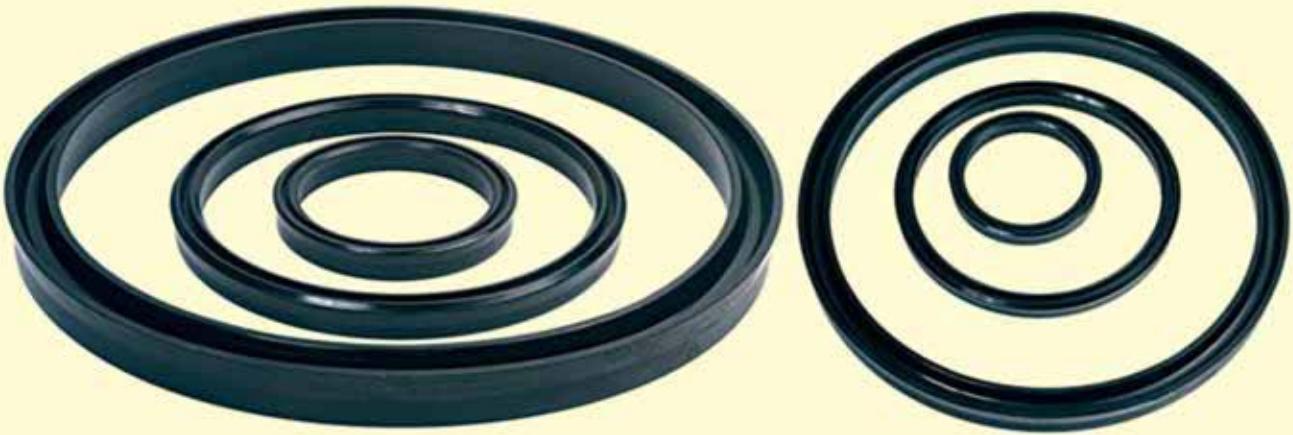

It uses for providing seal at piston and piston systems in hydraulic or pneumatic cylinders. Nutrings works in media like hydraulic oils, water, air etc. They are produced 85-90 SHA for hydraulic systems and 75-80 SHA for pneumatic systems.

GYP-8

The seals mentioned as Wiper Seal avoid entrance of any kind of dirt and unwished particles in hydraulic system as well as the cylinder. It must consider working condition when choosing wiper seal at hydraulic cylinder. Wiper seals that choose must have scraper characterize if hydraulic cylinder is going to work in dirty and muddy conditions and must have wiper characterized if hydraulic cylinder is not a heavy duty cylinder, if it

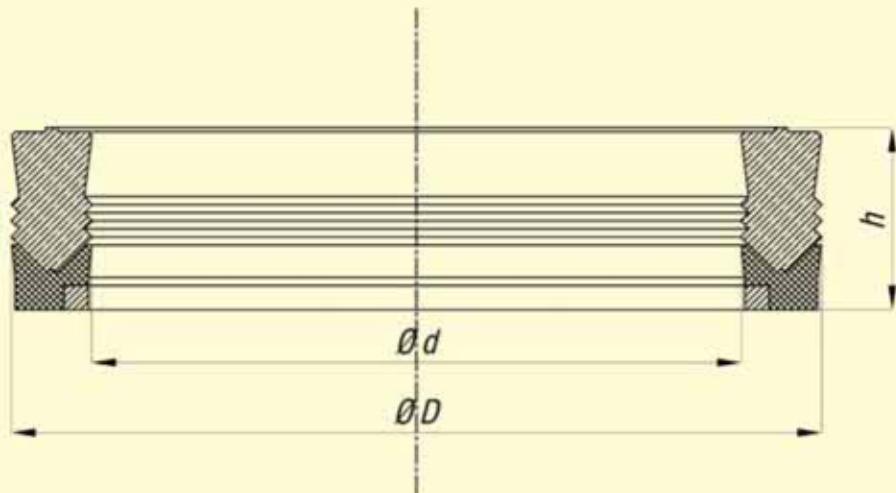

works as injection cylinder continuously at inside factory condition. The difference between this two provided either design of wiper seals lips or using proper material. With this reason it is a good choice PU based for heavy-duty cylinders and NBR based for the others.
